

FOI 38/2015

REQUEST

A while back I wrote to the environmental health department , expressing concern about heavy diesel fumes emissions from the rice factory at Europa way, coming into residential properties.

This has been going on for years , mainly because they work right up to the bottom of gardens and use junk machines.

The department claimed to be unaware of this problem.

I wish to know if anyone in the last decade, at least, has ever checked on the vehicles and emissions ?

RESPONSE

We have checked our records and I am unable to find any reports that there have been any checks carried out. However, if the vehicles or plant are only used on site this would be a Health & Safety Executive function.
